Chapter 1: The End of an Era

The 1960s were a time of great change for America's railroads. The Interstate Highway System was completed, giving trucking companies a major advantage over railroads. Airlines also began to offer more affordable and convenient travel options. As a result, railroads began to lose market share to other modes of transportation.

In response, railroads began to merge and consolidate. In 1968, the Pennsylvania Railroad and the New York Central Railroad merged to form the Penn Central Transportation Company. The Penn Central was the largest railroad in the United States, but it was also deeply in debt. In 1970, the Penn Central filed for bankruptcy.

The Penn Central's bankruptcy was a major turning point for the railroad industry. It showed that the old ways of doing business were no longer

sustainable. Railroads needed to find new ways to compete with other modes of transportation.

Chapter 2: A New Era

In the 1970s and 1980s, railroads began to invest in new technologies. Intermodal transportation allowed railroads to compete with trucking companies for long-distance freight shipments. Computerized train control helped railroads to improve their safety and efficiency.

In the 1990s and 2000s, railroads continued to invest in new technologies. High-speed rail allowed railroads to compete with airlines for long-distance passenger travel. Positive train control helped railroads to further improve their safety.

Today, America's railroads are a vital part of the transportation system. They carry more than 40% of the nation's freight and provide passenger service to millions of Americans each year.
