

Uveitis: An Update

By Nils Norrsell

Uveitis is a condition that causes inflammation of the uvea, the middle layer of the eye. The uvea is made up of the iris, the ciliary body, and the choroid. Uveitis can be caused by a variety of factors, including infection, autoimmune disorders, and trauma.

Uveitis can cause a variety of symptoms, including:

- Eye pain
- Redness
- Blurred vision
- Floaters
- Light sensitivity

Uveitis can be a serious condition if it is not treated promptly. It can lead to vision loss, cataracts, and glaucoma.

The treatment for uveitis depends on the underlying cause. In some cases, uveitis can be treated with eye drops or oral medications. In other cases, surgery may be necessary.

This book provides a comprehensive and up-to-date review of uveitis, covering all aspects of the disease, from its epidemiology and pathology to its diagnosis and management. It is written by a team of leading experts in the field and is essential reading for anyone involved in the care of patients with uveitis.

Table of Contents

1. Epidemiology and Etiology of Uveitis
2. Pathogenesis of Uveitis
3. Clinical Manifestations of Uveitis
4. Diagnostic Evaluation of Uveitis
5. Medical Management of Uveitis
6. Surgical Management of Uveitis
7. Prognosis of Uveitis
8. Future Directions in Uveitis Research
